

June 2016

New E6 Van Mounts

Press Release: For immediate release.

## Versalift UK launch new van mounts at Vertikal days.

Versalift have introduced new innovation to their range of Eurotel ETL and ETM van mounted platforms to coincide with the launch of Euro 6 vehicles in September 2016. Branded as new 'E6' models the new platforms have significant developments, with improvements to both safety and performance features.

The new ETL and ETM E6 platforms are now manufactured from high strength tensile steel, and provide significant improvements to both payload available and working envelope performance, with the introduction of load moment control (LMC).

Versalift will also be showcasing their new 14m, ETL38-F, installed on a 3.5T GVW, MWB Mercedes Sprinter. This new boom is the first 14m Versalift built onto a 3.5T GVW panel van. The ETM38-F can also be mounted onto the 3.5T GVW Iveco Daily35S and the VW Crafter.

Versalift Sales Director, Andy Bray, said "We have listened to our customers and the result is a significantly improved platform. Most significant developments are the relocation of the hydraulic valves to within the load area, an improved working envelope, a payload increase of over 50%, introduction of a 120° fly-boom and increased bucket capacity. With over 4,700 Versalift platforms in the UK market it is important that these improvements build upon our reputation for strong OEM backed after sales support".

Vertikal Days also sees the launch of Versalift UK's out of hours Response service, improving 24/7 support to our many customers along with the introduction of 4 R&M packages offering our customers a comprehensive range of service cover and peace of mind.
