Press Release: For immediate release.

Versalift ETL36-F's - ready for action with Richards CCTV

Caption: The Versalift ETL-36F's are ready for nationwide action

Vehicle mounted access platform market leader, Versalift UK, has delivered two new Euro 6 van-mounted platforms to Richards CCTV, a specialist provider of integrated digital security solutions. The ETL36-F (E6) was chosen for its ease of use and excellent outreach capabilities.

Given the diverse nature of security tasks undertaken by Richards CCTV to the UK's leading organisations in the public, commercial, retail and industrial sectors, the Versalift ETL36-F was the perfect choice. The platforms will be utilised to install and maintain CCTV, Access Control and Intruder Alarms nationwide.

In 2016, the 13.0m Euro 6 ETL36-F was re-designed to include everything that an independent security provider could require. The emergency lowering valves are conveniently located inside the pedestal within the load area for easier access and maintenance. New stronger, lighter booms have resulted in an impressive outreach of up to 8.5 metres using the LMC load sensing system. It also has more than 300Kg of spare payload, plus a safe working load of 230kg.

Philip Luckman and Richard Swinscoe, Engineering Managers at Richards CCTV said “As soon as the Versalift was demonstrated to us we could see the benefits to the company. The machine sold itself with its ease of use for the operator and excellent outreach - vertical and horizontal. We were impressed by Versalift’s commitment to not only supply a good product but the reassurance that the service and technical backup is right there, should you require it.”

Chris Wrenn, Versalift’s Southern Sales Manager added “We are delighted to be working with Richards CCTV. Their business ethos of creating a long-term relationship based on innovation, added value and quality services is matched by Versalift’s commitment to customer service.”

More about the ETL36-F (E6)

- No boom knuckle tail swing into carriage-way
- Stronger lighter boom structure
- Load Moment Control outreach system
- Relocation of hydraulic valves to pedestal
- 120° fly-boom
