Ref: AB/06/19 – VTM Joins Range

Press Release: For immediate release

VERSALIFT United Kingdom adds 17m VTM to van-mounted range

VERSALIFT United Kingdom, the market leading vehicle-mounted platform company, continues to shape the future of vehicle-mounted platforms with the addition of the VTM-170-F to its range of van-mounted platforms. The telescopic platform, which is mounted on a 7.0 tonne GVW Iveco Daily 70C, made its debut at the Vertikal Days event.

Joining the VTL series of van-mounted platforms launched by VERSALIFT in 2018, the VTM-170-F features the same ultra-high strength profiled boom which delivers exceptional rigidity, strength and smooth platform operation. It has an impressive 17m working height, 10.5m outreach along with 2,200kg of spare payload after driver passenger and fuel.

Ideally suited for motorway and dual carriageway use, the VTM-170-F is equipped with intuitive LMC load sensing providing variable outreach based on pressure in the boom lift cylinder. Other features include zero tail swing - even with A-frame outriggers deployed – and the choice of walk-in or duck-under bucket.

Replacing the LAT-160-F, the VTM-170-F has been designed and developed to equip highway maintenance contractors with improved performance and productivity through additional outreach, working height and payload.

The new VTM-170-F comes with a host of options allowing customisation to suit individual application and safety requirements. A secondary guarding anti-entrapment system designed to reduce the risk of entrapment is now available across the VTL and VTM range.

VTM-170-F Options:

- Bespoke storage racking
- Twin joystick LMC control system with LCD interface screen
- Secondary guarding anti-entrapment system
- 1kV certified insulation
- Chapter 8 compliance
- Stabiliser controls from bucket
- Slew rotation interlock
- Reversing camera
- Bucket rotator (2 x 90°)

A VTM-170-F demonstrator vehicle is available for customers by contacting sales@versalift.co.uk
