

Environment Policy Statement

Versalift United Kingdom Ltd recognises the impact it has on the environment and its obligations to protect it. We have implemented controls in place to monitor and mitigate those impacts, with targets for continuous improvement.

This is achieved by the active empowerment of employees and the building of relationships with our supply chain and operating within the framework of the company Business Assurance System.

The Business Assurance System is a framework of processes and documented procedures, built around the principals and requirements of ISO 14001. The framework provides specific instruction and guidance to employees and suppliers on their individual responsibilities and authority when undertaking activities on behalf of the company.

In support of this, the objectives of the company, employees, supply chain and subcontractors are to:

- Meet and where appropriate exceed the requirements of the business assurance system framework.
- Establish and continually review performance to company environmental objectives and targets.
- Continually improve our environmental procedures to mitigate our impact on the environment, reducing our use of natural resources and preventing pollution.
- Comply fully and where appropriate, exceed standards set in UK regulatory requirements and codes of practice.
- Consider the environmental effects of our raw material consumption and in particular the sustainable use of recycled materials wherever possible.
- Through strategic planning we will re-assess the environmental impact of all new developments and include environmental considerations in all investment decisions.
- Reduce waste created by our operations.

The company strive to continually improve the effectiveness of the business assurance system framework by setting measurable objectives, analysing feedback and acting on the results.

A management review and internal audit process is used to monitor and measure the achievement of business objectives to ensure the business delivers continual improvements of our environmental performance.

Andy Bray
