

Quality Policy Statement

“Versalift United Kingdom Limited is committed to supplying market leading vehicle mounted access platforms that fully comply with all safety, legal, legislative, and contractual requirements. We strive to manufacture products that provide ‘best in class’ performance and meet a quality standard that exceeds customer expectation, whilst providing our employees with stable, sustainable employment, and achieving our company financial objectives”.

As an accredited ISO 9001: 2015 organisation Versalift maintains a Quality Management System (QMS) that, in line with this *policy*, ensuring every aspect of quality is ingrained within the workforce, their processes, systems, and outputted products. The scope of the QMS extends throughout the supply chain and includes quality control of all supplied stock and outsourced product manufacture.

Continuous Improvement is a core methodology within the organisation and the management team work to deliver against specific measurable objectives and targets that are reviewed at regular intervals. To summarise these objectives (which can be found within the QMS) are:

- To deliver every product right first time to the specification of the customer within the bounds of legislation.
- To reduce all residual risk in the company’s products, processes, and people through effective quality management.
- To continue delivering cost effective growth whilst safeguarding all internal and external interested parties as far as reasonably practicable.

Versalift have three key strengths; their product, people, and customers. The key aim of this *policy* and the QMS is to empower our people to build, sell and service our product to satisfy our customers’ needs and expectations, whilst adding value throughout.
